PRIKTAI · HR-SOIL · MADE IN THAILAND

# Sprinkler on.
# Does the water reach the roots?

One HR-Soil 8-layer probe shows the water in every soil layer, down to 1 metre.

## 8 layers in one probe, 100 cm long

Every layer measures 3 values

- **Moisture**
- **Soil temp**
- **EC** — indicative, for trends

**0–50 cm — Feeder-root zone**
Most fine roots are near the surface under the canopy (roughly top 50 cm · DOA, ACIAR). Enough water? Drying out?

**50–100 cm — Below the root zone**
Is irrigation water draining past the roots, or is water sitting in the subsoil?

**Don't wait for drooping leaves to know they're thirsty.** See the real water in your own orchard soil, through dry-off, dry season and rains. 📱 Live readings on your phone, even with no internet in the orchard.

EC is indicative, for salinity/fertiliser trends only · One probe reads the soil where it is installed.

### Professional Set
8-layer probe + Gateway

**฿11,900**

Save ฿490

### 8-layer probe
5 m cable included

**฿8,900**

### HR-Soil Gateway
6 W solar · up to 8 probes (via splitter)

**฿3,490**

Extra cable ฿25 per metre · Cloud **free for the first year**, then ฿199 per probe per year
Without cloud, data still logs to the SD card and the phone view stays free
